

Job Title: Backend Developer (Java Spring Boot)

Job Description:

We are looking for a passionate **Backend Developer** to join our growing engineering team. You will be responsible for designing, developing, and maintaining scalable backend systems using **Java Spring Boot**, ensuring high performance and responsiveness to requests from the frontend.

Responsibilities:

- Design, develop, and maintain RESTful APIs using **Spring Boot** and **Spring Data JPA**
 - Work with relational databases (preferably **PostgreSQL** or **MySQL**)
 - Integrate third-party APIs and microservices
 - Implement authentication and authorization using **Spring Security**
 - Write clean, testable, and maintainable code following best practices
 - Collaborate with frontend developers and product teams to deliver end-to-end features
 - Monitor, debug, and optimize backend performance
 - Participate in code reviews and contribute to architectural decisions
-

Requirements:

- Strong proficiency in **Java (JDK 11 or higher)**
- Hands-on experience with **Spring Boot**, **Spring MVC**, and **Spring Data JPA**
- Good understanding of **REST API design principles**
- Experience with **SQL databases** (PostgreSQL/MySQL)
- Familiarity with **Git**, **Maven/Gradle**, and **Docker**

- Basic knowledge of **microservices architecture**
 - Experience with **unit testing (JUnit, Mockito)** is a plus
 - Knowledge of **cloud deployment (AWS, GCP, or Azure)** is an advantage
 - Excellent problem-solving and communication skills
-

Education:

- Bachelor's degree in Computer Science, Software Engineering, or related field
-

Preferred Qualifications:

- Experience working with **message queues (RabbitMQ, Kafka)**
- Understanding of **CI/CD pipelines**
- Knowledge of **containerization and orchestration (Docker, Kubernetes)**
- Familiarity with **AI-based tools** or **LLM integration** is a plus
